

Cushion Tire Forklift Part

Cushion Tire Forklift Parts - Cushion tires are a solid tire with a smooth profile. Its' tread is attached to a steel ring so as to form the tire, and the tire is pressed onto a hub which is connected to the forklift. These kinds of tires are suited for use in smooth floor warehouses and are available in different rubber or polyurethane compounds.

A poly tire has polyurethane as a replacement for rubber and is also a solid tire. They are utilized rather than cushion tires for such applications that require a lower steering effort or a higher tire load capacity than could be acquired making use of the cushion tire. Poly tires accessible in a variety of hardness ratings to meet various particular application needs. Narrow Aisle models and Orderpicker lift trucks would normally utilize small diameter poly tires for their outrigger load wheels.
