

Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually a device constructed out of top quality materials meant to be able to endure the most challenging operations and work environments. This piece of equipment could enable the individual driving to be able to work the blades hydraulically without leaving the seat. Side shifting units have the extra ability to laterally position the entire load or the arms in order to facilitate much more exact carrying and placement in a faster and more efficient method.

The fork pocket is quite unique and can enable the operator to be able to safely sway the blades into position without any worry of damaging the positioning cylinders. This could allow the operator the choice to be able to perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be converted into fork positioners on existing units.
