

Used Forklift Parts

Used Forklift Parts - Unavoidably, forklift components would eventually wear out and require replacing. The alternative of purchasing brand new parts can become expensive so one more idea is to obtain used components. This could save much money in the end. It is a good idea to buy used lift truck parts that have been remanufactured. These components would ensure that you are getting parts which would work for a long time and be productive.

Broken or worn parts that are reproduced are a cheaper answer than rebuilding. With rebuilding parts, just the parts which are broken or worn out get replaced, which means that other wearable parts could break down soon after acquisition.

Remanufactured components are cleaned after being taken apart and have the unusable parts replaced. This method can provide the best guarantee for used parts. All wearable parts are replaced regardless of age or wear which is another rationale why reproduced parts overall function so much better. Whichever component within the part is brand new and this provides much longer life to the second-hand part. Based on the lift truck parts which are being redone, the cleaning process and the entire remanufacturing process will vary.

The engines are cleaned after a complete disassembly. Several engine parts like spark plugs, pistons, rings, valve springs, filters, and valves can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to guarantee that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are disassembled, oven cleaned and pressure washed. A comprehensive inspection is done so as to check for any cracks. Bearings, bushings and seals are all replaced. Usually, the replacement components used on transmission components meet OEM specifications.

A few lift truck components such as the alternator, the water pump, torque converters, steer axles and the starter could be quite serviceable after worn components are replaced. The electronic control in the electric lift truck is maintained by the control card. This particular card could also be reproduced with replacing all aged and worn out parts. Unlike various lift truck parts the control card can only have the worn and aged components replaced.

Components that are remanufactured have to be thoroughly examined upon reassembly to ensure they are in good condition before being sold. When acquiring these parts, it is a good idea to be sure that they have undergone all of the proper testing and inspections. On certain larger parts such as steer axles, engines and transmissions, OEM specification replacement components must be utilized.

The forklift dealer can ensure that the parts they have remanufactured meet the OEM specifications. This will likewise ensure the parts meet industry standards. Many details go into remanufacturing used parts. This attention to detail provides more serviceability out of remanufactured parts compared to the components that were only rebuilt.
