

## Carriage Rollers

Carriage Rollers - Carriage rollers are specifically designed bearings that are utilized on lift masts to be able to help them function within difficult environmental surroundings. Lift masts are often subjected to oscillations, shocks, high dynamic and vibrations and static loads. This apparatus is regularly exposed to environmental influences like for instance heat, dust, cold, moisture, contamination and aggressive ambient air. Hence, the lift masts' guidance arrangements have to be particularly strong and have a certain high load carrying capability.

To be able to help compete in numerous different environmental surroundings, carriage rollers were designed for several lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided an economical operational security for the guidance arrangement of the lift masts.
