

## Barrel Clamp

Barrel Clamps - A Barrel Clamp is a mechanical or hydraulic attachment designed for a lift truck. It could be used in order to clutch the object you need to transport using the lift truck and is usually used for handling barrels, kegs and paper rolls. Some designs of barrel clamp accessories even have a rotate function. For instance, the rotate function allows the individual operating the forklift to be able to slot in a vertically stored paper inside the horizontal intake of a printing press.
